LabConnect Announces Enhanced Features to Client Website

(Seattle, July 8, 2016) — [LabConnect](#), a leading global provider of central laboratory and support services for biopharmaceutical, medical device and contract research organizations, announced the launch of a dramatically revamped client website with new features enabling central laboratories and investigators to streamline clinical trials.

The website now offers dashboards that make key study metrics available at a glance for ongoing monitoring and are downloadable to Excel for additional analysis. Prebuilt graphics on the dashboards make program information easier to understand, and filters will allow users to see only the information they're interested in.

The site also offers new reporting capabilities. Key reports are predefined, yet easily customized with filters, sorting, drill-down and restricted grid capabilities, enabling users to seek out specific information. Trends are easy to spot with Google Chart integration.

To help users get a better look at complex information, the site also features LabConnect's [BioVisualization](#) capabilities, which presents an intuitive visual representation of large, complex datasets and allows analysis in near real time. Using BioVisualization features, users can set alerts for critical sample analytes, effectively mine their data, and drill down to identify key outliers.

"Our goal is to always provide our clients with the best possible service," said Eudoro van der Biest, LabConnect director of IT. "The addition of these advanced digital tools make it easier for our clients to see and act on their data, supporting higher volume data requirements resulting from trends such as risk-based monitoring and adaptive trial designs."

For more information, login to the client website at labconnectllc.com.
